

3760-50 TORRENT™

TANK CLEANING HEAD

SUPERIOR SELF-ROTATING 3-D TANK CLEANING.

The new Torrent 50 self-rotating nozzle offers superior 3-D cleaning action for totes, tanks, and a variety of vessels. This new three dimensional nozzle is designed specifically for vessels with small openings of 6" (15 cm) or larger, and is rated for pressures up to 20,000 psi (1,400 bar), and flow rates up to 50 gpm (183 lpm).

The Torrent 50 features two high velocity water jets mounted on a rotating head. The nozzle is activated by the flow of high-pressure water. The water-jets spin vertically while the head spins horizontally resulting in complete 3-D coverage.

NLB's 3-D heads makes it unnecessary for workers to enter tanks during the cleaning process. This enhances worker safety, and reduces the amount of time that is needed to effectively clean the interior of the vessel. For larger vessels, the nozzles can be attached to a telescoping lance for positioning adjustment and angle articulation.

FEATURES INCLUDE

- Stainless steel virtually eliminates corrosion.
- Magnetic brake system which makes setting the rotation speed fast and easy.
- Improved internal seals for longer life and low maintenance.

*U.S. Patent Pending.

SPECIFICATIONS

Operational

Pressure 5,000 - 20,000 psi
(345 bar - 1380 bar)

Max. Flow 50 gpm (183 lpm)

Inlet Connection ¾" MP

Physical

Weight 42 lbs. (22 kg)

Length 19.6" (51 cm)

Max. Width 5.4" (14 cm)
